# LOUNGE AREA

# HYDRO-LIFT

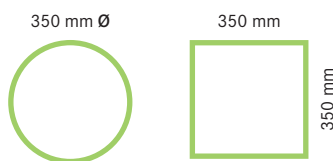

## TM R40 and TM Q51

### Lift columns for the lounge area

The successful TM R40 round series for the lounge area has been supplemented by an additional model: our TM Q51. This slim, square, inverted column performs even better thanks to its roller based guidance system.

### New! The Hydro-Lift

Both series are now equipped with a special compression spring: Hydro-Lift technology. The special hold function inside the column ensures that it can be held at any desk height. Simply pressing or lifting the desktop by hand is enough to adjust the height quickly and smoothly – a clear plus in terms of ease of use.

The disk foot consists of a black base plate weight with a decorative sheet metal cover attached to it in the matching color.

*Hydro-Lift:  
As ingenious as it is easy  
to use!*

TM Q51 Hydro

### Quick Facts – Technical data at a glance:
